JURRAS CUSTOMS

The Jurras/TC, Custom Hunting Handgun was conceived, based on accumulated experiences, acquired over two decades as a pioneer international handgun hunter and developmental ballistician. Some of these experiences were gained during the taking of over 150 head of medium and large game from Alaska to Africa with various handguns; others during the research, development, test, evaluation, and production of over 200,000,000 handgun cartridges.

The purpose of the Jurras/TC is to offer an ultra large-bore hunting handgun, when properly loaded, capable of taking any species of game in the world.

A ruggedly distinctive handgun, one of classic design and heirloom quality; incorporating five unique handgun cartridges designed by Jurras they offer the discriminating owner the use of a wide variety of rifle bullets, to obtain maximum penetration in the largest game.

The Jurras/TC, was not designed to compete with the various pseudo/handgun bolt action designs; as to high velocity, high intensity loadings. The 375, 416, 460, 475, and 500 calibers are not high intensity loadings. Each cartridge has loads designed to develop from 1000 f.p.s. to 1650 f.p.s. velocities at the 40,000 c.u.p. level when using bullets ranging from 285 to 600 grains in weight.

The Jurras/TC handgun incorporates a specially heat treated action with individually fitted barrels, 12 inches in length. The barrels are a straight taper, .810" diameter at the muzzle. Barrels are turned from match grade Atkinson and Shilen blanks. Front sight, and rear sight express bases are machined from stock. The adjustable rear sight is the rugged Behlert design; excepting the 500 caliber which utilizes a three leaf folding, express sight. Stocks are of Jurras/
